Synology® Launches the VS60, a Power-saving, Live-view Security Appliance for IP Camera Live-viewing

Taipei, Taiwan—November 16, 2009—Synology® Inc. today launched the Visual Station V60, a live-view appliance which saves power and easily monitors multiple IP cameras managed with a Synology Disk Station.

VS60 is designed to provide a live-view of IP cameras managed with a Synology Disk Station and displays it on a connected LCD monitor or TV screen. The built-in DSP (Digital Signal Processor) efficiently processes images, lowering power usage down to only 5.2 Watts for the entire system, providing an economical solution for smaller scale setups. In addition, VS60 offers the convenience of live-viewing cameras in a multi-screen wall format for large-scale deployments.

"VS60 is Synology's next step in the security market after the debut of Surveillance Station, a digital video recording application in Disk Station's system firmware, Synology DSM 2.2," commented Edward Lin, marketing director of Synology. Given the proliferation of smaller organizations moving to incorporate IP surveillance solutions, the VS60's timely debut is an easy-to-use, low-power surveillance solution.

VS60 supports the essential features of IP cameras; PTZ (pan-tilt-zoom), snapshot, and two USB ports for mouse operation and external disk connection. All operations are done with clicks of the mouse. As a result, no complex training is required and individuals like cashiers in small stores can easily use it to monitor their stores.

Availability

VS60 starts shipping today.

Synology at a Glance

Founded in 2000, Synology is a young and energetic company dedicated to developing high-performance, reliable, versatile, and environmentally-friendly Network Attached Storage (NAS) products. Our goal is to deliver user-friendly solutions and solid customer service to satisfy the needs of businesses, home offices, individual users and families.
