Synology[®] Introduces DiskStation DS216

All-in-One, high-performance NAS server suitable for small offices and workgroups

Barcelona—December 10, 2015—Synology[®] Inc. today launched DiskStation DS216, a feature-rich 2-bay NAS server conceived to be a perfect match for workgroups and office environment, and specially designed for sharing and protecting data.

“DS216 will quickly become your best work partner, providing multiple handy office applications, assisting on improving productivity at work.” said Jason Fan, product manager at Synology Inc.

DS216 is built to deliver optimal multi-tasking experience at best price/performance ratio. Powered by a dual-core 1.3 GHz CPU and 512 MB DDR3 memory, DS216 outperforms its predecessor and delivers an exceeding read and write speed at over 111 MB/s under RAID 1 configuration in a Windows[®] environment.

With the built-in Floating-Point Unit (FPU) which further enhances the overall capability of the main CPU, the DS216 is particularly advantageous in speeding up thumbnail processing, and enhancing photo viewing at different resolutions. With an encryption engine, it also offloads the encryption calculation task away from the main CPU, helping to improve file transfer speeds. DS216 is equipped with a USB 3.0 port and a USB copy button on the front panel for easy data transfer.

Designed with the mindset of non-stopping up-time service, DS216 is equipped with hot-swappable and tool-less drive trays for easy installation, simplifying drive replacement and maintenance.

DS216 runs on [DiskStation Manager \(DSM\)](#), the most advanced and intuitive operating system for NAS devices. Featuring a wide range of applications from backup to network management, DS216 provides all essential business services and increased productivity at work. Synology was named "PC Mag Business Choice Award winner" for the second consecutive year, and received the highest rating in every element of the survey, including reliability, value, and likelihood to recommend.

Availability

Synology DiskStation DS216 is now shipping globally.

Synology at a Glance

Synology creates network attached storage, IP surveillance solutions, and network equipment that transform the way users manage data, conduct surveillance, and manage network in the cloud era. By taking full advantage of the latest technologies, Synology aims to help users

centralize data storage and backup, share files on-the-go, implement professional surveillance solutions, and manage network in reliable and affordable ways. Synology is committed to delivering products with forward-thinking features and the best in class customer services.
